Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 19, 2008 has been entered.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Once the below rejections are overcome, another prior art rejection will be performed to determine the patentability of the claims.

The preambles of Claims 1 and 10 state a means for detecting a neurological injury as having a secondary injury associated with neurotrauma in a subject. Furthermore, Claims 1 and 10 disclose a biochemical analyzer for analyzing fluid samples to determine the presence of the secondary injury. The specification does not support the detection of a neurological injury as having a secondary injury, nor does the specification support the use of the biochemical analyzer for determining the presence of a secondary injury. The specification discloses a secondary injury as occurring after a neurological injury has occurred, wherein the injury causes an influx of cellular and chemical compounds to the injury site, thereby causing a secondary injury. The biochemical analyzer is only used to determine the presence of cellular or chemical compounds in response to a physiological response to a neurological injury (as properly claimed in Claim 2), thereby allowing the physician or first responder to administer drugs to prevent a secondary injury from happening.

Page 3

Claim 1 has also been amended to include a biochemical analyzer as part of the computing device. The specification does not support this limitation. The specification states the computing system is operably connected to the biochemical analyzer for display of the acquired results from the analyzer.

5. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 has been amended to include a biochemical analyzer. Claim 2 also discloses a biochemical analyzer. It is unclear to the Examiner if the analyzer of Claim 2 Art Unit: 3736

is a second biochemical analyzer. It appears Claim 2 should be cancelled. The subject matter of Claim 2, in particular, detecting "the presence of chemical species or concentrations indicative of the neurological injury" should be incorporated into Claim 1 as part of the biochemical analyzer limitation.

Claim 2 states "a biochemical analyzer sampling". It is unclear to the Examiner how an analyzing unit is capable of sampling. It appears the claim should read as "a biochemical analyzer for analyzing a sample". Likewise, Claim 11 should read as such.

Claim 10 has been amended to utilize a biochemical analyzer, while Claim 11 discloses sampling a means for determining the presence of chemical species or concentrations indicative of neurological injury. It is unclear to the Examiner if there are additional samples of fluid being taken from the patient for analyzing. It appears Claim 11 should be cancelled. The subject matter of Claim 11, in particular, detecting "the presence of chemical species or concentrations indicative of the neurological injury" should be incorporated into Claim 10 as part of the biochemical analyzer limitation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Szmal whose telephone number is (571)272-4733. The examiner can normally be reached on Monday-Friday, with second Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Max Hindenburg can be reached on (571) 272-4726. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
